About Zscaler

Zscaler is the industry-first multi-tenant security provider. Zscaler services enable any end user, from any place, using any device a rich Internet experience while enforcing security and business policy. We deliver this service using our Global Cloud Infrastructure. Rather than buying appliances, we have a new on-demand business model, whereby customers pay a subscription fee. Our cloud service is built upon ground-breaking, high-performance technology that eliminates latency. Zscaler reduces risk, lowers cost, improves resource utilization and simplifies IT administration.

Why Zscaler

- » Increases Security & Productivity While Reducing Costs.
- » Only SaaS with ultra-low latency.
- » Safe and fast Internet from any place, on any device.

Security

Integrated, Comprehensive & On-demand Web 2.0 threat protection

Global Distributed Architecture

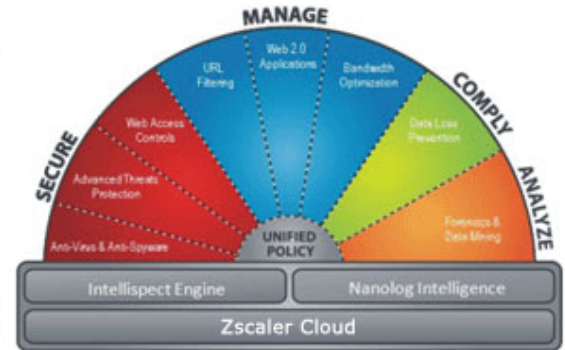

SaaS based, highly scalable and reliable model
Global policy - single policy follows user

Compliance & Real-Time Reporting

Consolidated reporting and tracking in real-time
Centralized management with application-based policies

Cost Savings

No appliance and software related costs
Operational expense vs. Capital expense

Simplicity

Eliminates complex point solutions
Easy to deploy and manage policies

Zscaler is the first and only company that provides a distributed security global network that delivers rapid response time and high availability.
